PROJECTS / OPEN-SOURCE

WEATHER WEB APPLICATION | [LINK](#)

HTML, CSS, JavaScript

- This project aims to provide weather information for a specific city based on user input.
- The application programming interface (API) used in this project is provided by API-Ninjas.
- The API retrieves weather details for the city specified by the user.
- The web application offers data such as temperature, humidity, and wind pressure for the selected city.

BLOG WEBSITE | [LINK](#)

ReactJS, Node.js, MongoDB

- This project is designed to create a dynamic blog website where users can publish, read, and interact with blog posts.
- The website includes user registration and authentication, allowing users to create and manage their profiles. Registered users can write and edit their blog posts, while visitors can read the blog posts.
- The website offers an intuitive and user-friendly interface for creating and consuming blog content, promoting active involvement within the blogging community.
